## Designing and Fabricating with Special New Metallic Colors

The appearance and seaming qualities of these new special metallic colors is different than conventional solid surfaces. These three products have a light reflective quality that provides an optical effect or “direction” that shows lighter or darker depending on the angle from which they are viewed. This unique reflective quality allows patterns to be created where sheets are joined together. All seams will show this inherent reflective quality and will be visible unlike standard solid surface.

The color will appear to change when viewed from different angles. These effects can be incorporated into your designs. These directional patterns are not detectable in single sheet applications where no seam is required. Seams made from the same sheet will also be noticeable. Designers and fabricators must consider these characteristics when using these three products.
